

Environment & Sustainability Policy

Taylor

Taylor are the market leaders in providing waste containment and recycling systems, products and services worldwide. We believe that if waste management and recycling initiatives are to be successful, we need to create innovative products and solutions that appeal to ordinary people. We understand that waste management systems and processes are a fundamental part of our business.

Taylor understand that they should be at the forefront as leaders in principles and processes for managing and developing a sustainable environment. We are therefore committed to the protection and conservation of the natural environment, now and into the future.

Taylor views environmental attainment as a key priority and aspires to continually improve its performance on an incremental basis. Business activities have been analysed to determine the significant aspects and impacts of our operations with greatest potential to cause environmental harm. Measurable objectives and targets have been set against these items to manage, control and wherever possible, reduced the risks.

Our guiding principles are therefore:

- ☑ Conduct all aspects of our business in a sustainable, responsible and competent manner so as to minimise the potential for pollution and environmental impact.
- ☑ By reinforcing consultation with our customers, partners and employees, we aim to create a common goal of sustainable environmental protection and pollution prevention.
- ☑ Work with our clients and partners to ensure that products and services present the lowest environmental impact, unless an overriding need can be shown to outweigh the environmental and ecological interest and there are no alternate solutions.
- ☑ Monitor, measure and seek ways to reduce and manage our carbon footprint.
- ☑ Select and use natural resources efficiently and effectively to promote a sustainable future.
- ☑ Where waste is generated we will aim to minimize, recycle or securely dispose of such waste.
- ☑ Ensure that all organisations, contractors and suppliers who provide products and services operate in a manner that is socially responsible, and that they are aware of Taylors core values.
- ☑ We will promote innovation, research and development, environmental, economic and social solutions that will drive our business model forward for the future.
- ☑ We will work to improve and minimise the environmental impacts of our business by continually improving our environmental management systems.
- ☑ We will ensure compliance with all relevant legislation, contractual or other obligations, and anticipating them whenever possible. We will ensure that all permits, licenses and regulations are maintained and will work closely with all interested parties to demonstrate our compliance.
- ☑ We will deploy and maintain a UKAS accredited and verified management exceeding the requirements of ISO 14001 allowing the organisation to improving, control and reducing the impact of our activities
- ☑ We will plan for and take effective actions during or following emergencies in order to sustain business continuity, protect our business, sustain an ongoing supply of products and services where physically possible and minimise the
